

Salton Sea Wind & H2S Dashboard

NASA/JPL buoy wind · CARB H2S monitoring sites · generated 2026-08-05 16:52 UTC

This is an initial demo, not a finished monitoring tool. Wind data (below) is real, from NASA/JPL's two Salton Sea buoys (fetched 2026-08-05). H2S data is **synthetic placeholder data** -- the real CARB monitoring-site data isn't wired in yet (site-id mapping unresolved). Treat every H2S number below as a stand-in for layout/plumbing purposes only.

Wind — NASA/JPL Buoys (real)

Buoy	Wind Speed (m/s, avg)	Wind Direction (deg, avg)	Last Update (UTC)
SS1	5.9	103	2026-08-05T09:10:47
SS1A	5.4	93	2026-08-05T09:10:47

Hydrogen Sulfide — CARB Sites (SYNTHETIC placeholder)

Site	H2S (ppb)	Wind Speed (mph)	Wind Direction (deg)
Salton Sea Park (33602)	65.5	7.1	n/a
Torres-Martinez (33601)	7.2	11.4	n/a
Mecca -- Saul Martinez (33033)	5.4	4.8	324
Niland English (13997)	1.3	n/a	n/a

Rows shaded red exceed this demo's illustrative threshold (25 ppb) -- not a real regulatory comparison. "n/a" wind direction means that CARB site doesn't report it (Salton Sea Park, Torres-Martinez, Niland English); the JPL buoy table above is the stand-in for direction at those sites until a better match is found.

Data quality notes

- wind: raw data, not quality-checked -- informational only (NASA/JPL's own caveat on this page)
- h2s: SYNTHETIC placeholder data -- CARB site-id mapping unresolved, see `synthetic_salton_h2s_source.py`
